

Ciência da Computação Algoritmos e Estrutura de Dados 1

Lista Duplamente Encadeada

Simulação

Prof. Rafael Liberato liberato@utfpr.edu.br

Objetivos

Prover simulações de possíveis algoritmos para as principais funções da Lista Duplamente Encadeada

É importante ressaltar que as simulações não representam a **única** e/ou a **melhor** forma de desenvolver o algoritmo. É apenas uma sugestão para orientar no desenvolvimento.

TAD Lista

Lista Duplamente Encadeada

```
#define ItemType int
                                       list
                                                 size
typedef struct{
                                                 last
   Node *first;
                                                 first
   Node *last;
   int size:
}List;
List *createList ();
void initializeList(List *1);
int addList(List *1, ItemType e);
int addList(List* q, ItemType e, int index);
int removeList(List* q, int index, ItemType *e);
int removeList(List* q, ItemType* e);
                                                      typedef struct node{
int getList(List* q, int index, ItemType* e);
                                                          ItemType
                                                                       data;
int setList(List* q, int index, ItemType* e);
                                                          struct node *prev
int indexOfList(List* q, ItemType* e);
                                                          struct node *next:
int containsList(List* q, ItemType *e);
                                                      }Node;
int sizeList(List* q);
int isEmptyList(List* q);
void printList(List* q);
```

Simulações (**)

Simulações

Simulação passo a passo das principais funções

- int addLastList(List *1, ItemType e);
- int addList(List* l, ItemType e, int index);
- int removeList(List* l, int index, ItemType *e);
- int removeElementList(List* 1, ItemType* e);

```
List *createList ();
```

```
void initializeList(List *1);
int addLastList(List *1, ItemType e);
int addList(List* 1, ItemType e, int index);
int removeList(List* 1, int index, ItemType *e);
int removeElementList(List* 1, ItemType* e);
